

Teammate Handbook

How to build your screen and work with the team

Read this first: everything you need, in simple words

Our team repository

Open in the browser: <https://github.com/Group2Orange/Project-1>

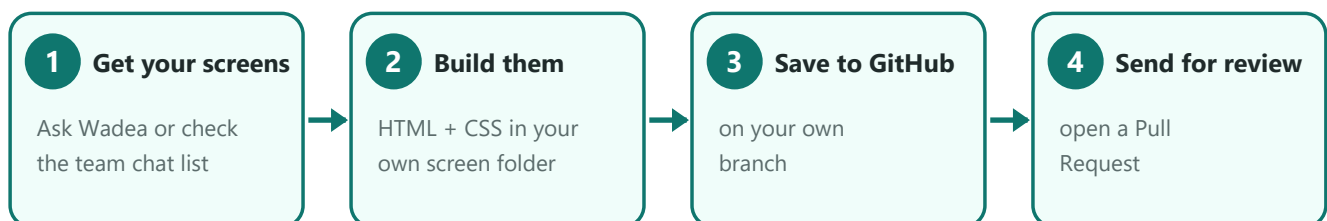

Address used in commands: <https://github.com/Group2Orange/Project-1.git>

1. Welcome: what we are building

We are building an **HR Management System**: employees, attendance, leave, payroll and recruitment. The design is made in Figma. There are two kinds of users, **HR staff** and **employees**, each with their own screens and their own **navbar** (the bar with links at the top of the page). **Each of you builds a few screens** from that design.

Right now we only use **HTML and CSS**. JavaScript comes later, only to save data. Fonts are **Space Grotesk** and **Public Sans**, icons are **Material Symbols**, and the style is a calm teal theme. The fonts and icons are already loaded in every screen. Colors and sizes come from the Figma design.

Your job, in 4 steps:

2. What you need on your computer

Tool	What it is for	Where to get it
VS Code	Where you write your code. Install the Live Server extension to see your page in the browser.	code.visualstudio.com
Git	Saves your work and sends it to the team.	git-scm.com/downloads
GitHub account	The website where our project lives. Send your username to Wadea to be invited.	github.com (free)

Which screens are mine? Wadea gives each of you a list of screen numbers in the team chat. The full list is in section 11. The design links and the team colors and fonts are in [guides/design-links.md](#).

3. The project structure

Here is the whole project on one page. Screens live in three folders: **common/** (used by everybody), **hr/** and **employee/**.

```
Project-1/
|-- index.html          home page: links to every screen
|-- README.md           short intro shown on GitHub
|-- .gitignore          files Git must NOT upload
|
|-- common/             SCREENS USED BY EVERYBODY  <-- YOU WORK HERE
|   |-- login/ home/ profile/ edit-profile/
|   |-- policies/ about/ contact/
|
|-- hr/                 SCREENS ONLY FOR HR          <-- YOU WORK HERE
|   |-- employees/ employee-form/ employee-details/
|   |-- tasks/ task-form/ task-review/
|   |-- requests/ feedback/
|
|-- employee/           SCREENS ONLY FOR EMPLOYEES  <-- YOU WORK HERE
|   |-- my-tasks/ task-details/
|   |-- new-request/ my-requests/
|
|-- guides/             design links and the guides
```

The big idea: one folder = one screen. Every screen folder holds exactly three files, all named after the screen:

```
employee/new-request/
|-- new-request.html    the page (what is on it)
|-- new-request.css     the style (how it looks)
|-- new-request.js      the code (what it does, later)
```

TIP: The screens are already created for you as **empty starters**. The .html only has the basic page code, already linked to its own .css and .js (and to the fonts and icons). The .css and .js are empty. **You fill them in.**

TIP: Common screens are built once. Login, home, profile, policies and the others in common/ are used by both HR and employees, so there is only one copy of each. For now they show the HR navbar (the longer one). Later we will learn how to show the right navbar for each user.

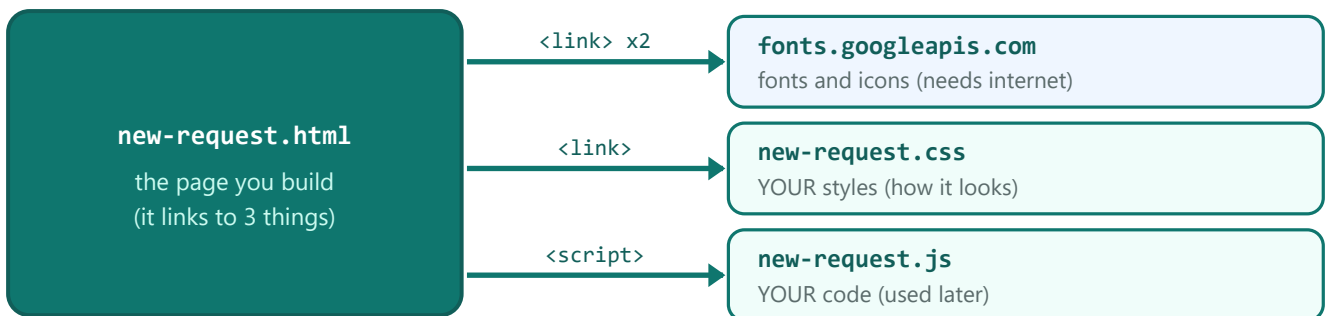

4. What is inside each folder, and can I edit it?

Folder / file	What it holds and how to use it	Edit it?
<code>common/</code> <code>hr/</code> <code>employee/</code>	Your screen folders. Inside common/ , hr/ and employee/ , each screen has its own folder with the 3 files of that screen. This is the only place you work.	YES (your screens only)
<code><screen>.html</code>	The content of the page: title, table, form, buttons. Write it after your navbar and before the script line.	YES
<code><screen>.css</code>	The look of the page: colors, spacing, layout. Only this screen loads it.	YES
<code><screen>.js</code>	The behavior of the page. Leave it empty for now. We use it in the JavaScript phase.	YES
<code>index.html</code>	The home page with a link to every screen. Open it with Live Server to jump between screens.	NO (Wadea)
<code>guides/</code>	The design links and the guides (these PDFs).	NO
<code>README.md</code>	The intro people read first on GitHub.	NO
<code>.gitignore</code>	Tells Git which junk files not to upload.	NO

IMPORTANT: If you think a shared file needs a change (`index.html`, a new screen), **do not edit it yourself**. Tell Wadea in the team chat.

5. How your 3 files are connected

Your .html file is the boss. It **links** to the other files, so the browser knows where to find them. **These links are already written for you.**

This is what an empty starter screen looks like (the two Google links are shortened here). You fill in the empty space:

```
<head>
  ...
  <link rel="stylesheet" href="https://fonts.googleapis.com/css2?family=Public+Sans...">
  <link rel="stylesheet" href="https://fonts.googleapis.com/css2?family=Material...">
  <link rel="stylesheet" href="new-request.css">
</head>
<body>

  <script src="new-request.js"></script>
</body>
```

Fonts and icons come from Google, so you need internet to see them. You never write those links yourself: they are already in your file.

TIP: What is shared? Nothing is linked between screens: every screen is standalone. Each of you builds the **navbar** in your own screens from the Figma design, and the **team colors, fonts and navbar links** are listed in **guides/design-links.md**. Later in the course we will learn how to write the navbar once and reuse it on every screen.

6. Build your screen, step by step

1 Open the project in VS Code

File > Open Folder > choose the **Project-1** folder. Then open your screen's folder inside **common/**, **hr/** or **employee/**.

2 Build the navbar

Every screen except login has a **navbar**: the bar with links at the top. Build it from the Figma design, right after `<body>`. HR screens show the **HR navbar** (more links), employee screens show the **employee navbar**, and common screens show the HR navbar for now. The list of links is in **guides/design-links.md**. To link to another screen, go up two folders (`../..`), then into its group and screen folder:

```
<a href="../../hr/employees/employees.html">Employees</a>
```

3

Write the page content (HTML)

Look at the Figma design and write what you see, from top to bottom. Use clear tags and short class names in lowercase with dashes:

```
<main class="request-page">
  <h1>Submit a Request</h1>
  <form class="request-form">
    ...
  </form>
</main>
```

4

Style it (CSS)

Write your styles in your own .css file. Start it with this so the fonts are applied, then follow the Figma design:

```
body {
  margin: 0;
  font-family: "Public Sans", sans-serif;
}

h1, h2, h3 {
  font-family: "Space Grotesk", sans-serif;
}
```

Colors and sizes: copy them from the Figma design (the team's main colors are also listed in guides/design-links.md). Icons: `<span class="material-symbols-outlined">home</span>`. Pick icon names at fonts.google.com/icons.

5

Look at it in the browser

Right-click your .html file > **Open with Live Server**. Every time you save (Ctrl+S) the page refreshes. Compare it with the Figma design.

6

Save your work with Git

Do it every time something works, not only at the end. See the next section.

7

Send it for review

Open a Pull Request. When Wadea merges it, start your next screen.

7. Working with GitHub: the short version

Word	What it means
Branch	Your own copy of the project to work on, so you never break anyone else's work.
Commit	A saved snapshot of your work, with a short message.
Push / Pull	Push uploads your work to GitHub. Pull downloads your teammates' work.
Pull Request	A request that says "please add my work to the main project". Wadea checks it and merges it.

A. One-time setup

1

Get set up

Create your GitHub account and send your username to Wadea. Accept the invitation email. Install Git, then tell it who you are:

```
git config --global user.name "Your Name"
git config --global user.email "your-email@example.com"
```

2

Copy the project to your computer

Do this **only after Wadea says the project is uploaded**. Open a terminal in the folder where you keep projects, then:

```
git clone https://github.com/Group2Orange/Project-1.git
cd Project-1
code .
```

Always work inside this **Project-1** folder. The first time you push, a window asks you to sign in to GitHub. That is normal.

B. Every time you work on a screen (example: Submit a Request)

1

Get the latest, then make your own branch

One branch per screen. Its name is **screen/** + the group folder (common, hr or employee) + your screen folder, joined with dashes. Example: **employee/new-request** becomes **screen/employee-new-request**.

```
git switch main
git pull
git switch -c screen/employee-new-request
```

2

Build your screen

See section 6. Only change files inside your own screen folder.

3

Check, then save

Only files from your screen folder should appear. If you see other files, stop and ask Wadea.

```
git status
git add employee/new-request
git commit -m "Add request form"
```

WARNING: Never use `git add .` — it adds everything, even files that are not yours. Always name your own folder.

4

Upload your branch

The first time on a new branch use the long command. After that, just **git push**. Push at the end of every work session: it is your backup.

```
git push -u origin screen/employee-new-request
```

5

Open a Pull Request

- Open <https://github.com/Group2Orange/Project-1> and click the yellow **Compare & pull request** button.
- Write a short title (for example **Add Submit Request screen**). Check that it says **base: main**, then click **Create pull request**.
- Tell Wadea in the team chat. If he asks for changes, fix them, commit and push again. The Pull Request updates by itself.

6

After Wadea merges it

Clean up, then start your next screen from step 1.

```
git switch main
git pull
git branch -d screen/employee-new-request
```

8. The golden rules

DO	DON'T
• Work on your own branch	• Work directly on main
• Edit only your screen folders	• Edit index.html or guides/
• Run <code>git pull</code> on main before you start	• Use <code>git add .</code>
• Commit small and often	• Use <code>git push --force</code> or <code>git reset --hard</code>
• Push before you stop working	• Invent your own colors: use the design's
• Use the colors and fonts from the design	• Rename or delete files that are not yours
• Write clear commit messages	• Leave your work only on your computer
• Ask Wadea when you are not sure	• Panic. Everything can be fixed.

9. Checklist before you open a Pull Request

- [] My page opens in the browser and looks like the Figma design.
- [] My navbar matches the design (HR or employee version) and its links open the right screens.
- [] My colors and fonts match the Figma design.
- [] The links to my .css and .js files work (nothing is missing).
- [] **git status** shows only files from my own screen folder.
- [] My commit messages say what I did.
- [] I pushed my branch, so GitHub has my latest work.

10. If something goes wrong

Problem	What to do
<code>fatal: not a git repository</code>	You are in the wrong folder. Go into the project: <code>cd Project-1</code> .
I changed files while I was on main	Before you commit, run <code>git switch -c screen/your-screen</code> . Your changes come with you. Then commit as usual.
<code>rejected ... fetch first</code>	Run <code>git pull</code> , then <code>git push</code> again.
<code>403</code> or <code>Permission denied</code>	You do not have Write access yet. Check the invitation, then ask Wadea.
Which branch am I on?	Run <code>git branch</code> . The one with a star (*) is your branch.
I am lost or scared I broke something	Stop. Do not delete any folders. Run <code>git status</code> , take a screenshot and send it to the team chat. Anything you already pushed is safe on GitHub.

11. The 19 screens and their folders

Wadea will tell you which numbers are yours. Each number is one folder with 3 files.

#	Screen	Folder
1	Login	<code>common/login/</code>
2	Home and Services	<code>common/home/</code>
3	User Profile	<code>common/profile/</code>
4	Edit Profile	<code>common/edit-profile/</code>
5	Company Policies	<code>common/policies/</code>
6	About Us and Team	<code>common/about/</code>
7	Contact Us and Submit Feedback	<code>common/contact/</code>
8	HR Employee Management	<code>hr/employees/</code>
9	Add or Edit Employee Account	<code>hr/employee-form/</code>
10	Employee Details (HR)	<code>hr/employee-details/</code>
11	HR Task Management	<code>hr/tasks/</code>
12	Create or Edit and Assign Task	<code>hr/task-form/</code>
13	HR Task Submission Review	<code>hr/task-review/</code>
14	HR Leave and Early-Departure Requests	<code>hr/requests/</code>
15	HR Employee Feedback Inbox	<code>hr/feedback/</code>
16	Employee My Tasks	<code>employee/my-tasks/</code>
17	Employee Task Details and Submit Solution	<code>employee/task-details/</code>
18	Submit Leave or Early-Departure Request	<code>employee/new-request/</code>
19	Employee My Leave and Early-Departure Requests	<code>employee/my-requests/</code>

TIP: The screens in **common/** (1 to 7) are used by both HR and employees. The screens in **hr/** (8 to 15) are only for HR. The screens in **employee/** (16 to 19) are only for employees.
